

Technical Service Bulletin

ascom
Ascom® Wireless Solutions Inc.

Product: DCT1900+ System

Purpose: Inform distributors/customers on Freeset Upgrades training class.

Date: 8/15/06

Freeset Upgrades Training

General

The DCT1900+ system is a new product offering from Ascom Wireless Solutions. The DCT1900+ system uses DECT (Digital Enhanced Cordless Telecommunications) and a line of portable telephones that are configured and commissioned using SIM card programming and IMEI subscription.

Who Should Attend

This course is designed for people who are responsible for installing, operating, upgrading and maintaining a Freeset DCT1900+ Standalone or Mobility Server system and **have already attended a Freeset Installation and Maintenance and/or a Mobility Server Administration course prior to July 1, 2006.** System installers, owners and system integrators will need to attend this course as part of the certification track for the Freeset product line.

Course Outline

- Comparison between DCT1900 and DCT1900+ systems
- Upgrade requirements and procedures
- Administration of DCT1900+ and site survey

Duration

1 day
